

WIRETAP IMPLEMENTED BY MEDIA GATEWAY MULTICASTING

5

Abstract

- 10 Media gateways operate under the control of an intelligent node or switch associated with a
wiretap party and are configured on a per call basis to establish multicasting communication
links to law enforcement authorities while simultaneously supporting the end-to-end
telephony services elected by the calling and/or called party. The multicasting
communication links supply law enforcement authorities with communications generated by
15 the calling party and the terminating party.
